

# Develop and Disseminate Hands-on Lab Materials of Privacy Concepts and Technologies to Educators

Na Li, Lin Li, Mengjun Xie and Bugrahan Yalvac

Presented by Dr. Na Li  
Associated Professor  
The Coordinator of Cybersecurity Concentration  
Department of Computer Science  
Prairie View A&M University

@CISSE 2023

**NSF Award # 1712496**

**Developing Innovative Privacy Learning Modules to Engage Students in Cybersecurity Education**

- Prairie View A&M University

Na Li (Principal Investigator)

Lin Li (Co-Principal Investigator)

- University of Tennessee at Chattanooga

Mengjun Xie (Co-Principal Investigator)

Li Yang (Former Co-Principal Investigator)

Evaluator: Bugrahan Yalvac (Texas A&M University, College Station)

# Introduction

- Privacy definition -> different preferences
- Privacy v.s. Security -> not the same
- Privacy protection is needed (data breach incidents)
- More critical in the era of big data
- The lack of privacy educational materials
- Target younger generations -> hands-on based learning

# Project Objectives

Develop privacy curriculum for undergraduate students and explore the best way to integrate privacy into cybersecurity education. Specifically, design and develop:

- self-contained privacy learning modules used not only for privacy course but also other related courses, such as Web Development, and Computer Network.
- effective hands-on labs for different learning modules
- designing and implementing labware to learn privacy related concepts

# Topics of Privacy

- Data Privacy
- De-anonymization
- Relationship Privacy in Online Social Networks
- Image Privacy
- Location Privacy in Location Based Services (LBS)
- Web Tracking
- IoT Security & Privacy

# Location Based Services (LBS)

- Software services using location (geographical) data to control features (ref. wikipedia)
- Widely used in social networks, often accessible with mobile devices (e.g., Facebook, Foursquare, etc)
- Question: should a client always trust a LBS?

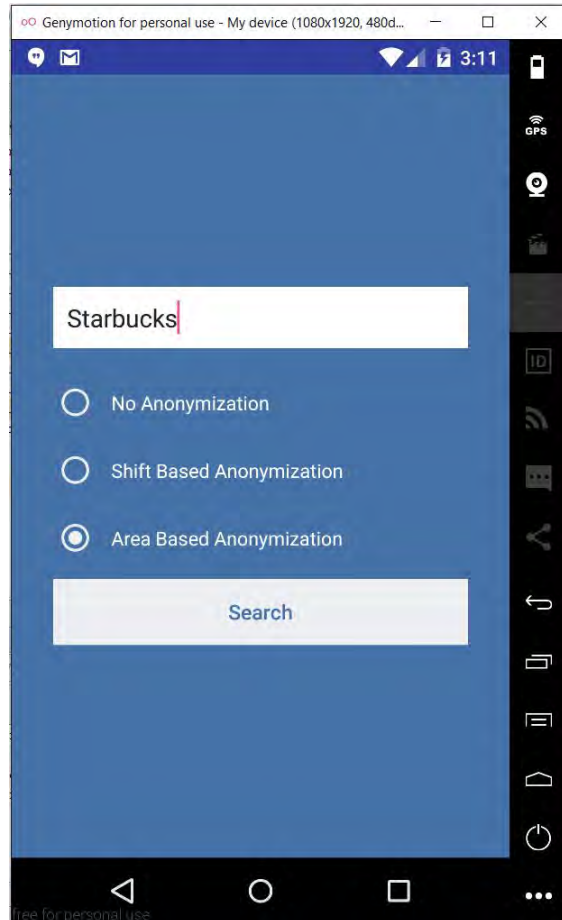

# Anonymization Mechanisms in LBS

- Anonymization prevents from exposing user's exact location to LBS
- Mechanisms we implemented include
  - No Anonymization
  - Shift-based Anonymization
  - Area-based Anonymization

# Privacy-aware LBS System

Three components: (i) Android Client, (ii) semi-honest LBS Server, (iii) trustable Analytic Server

I. Android Client

Requests with user location info

Responses with retrieved landmark location info

Welcome to our Location Based Service

II. LBS Server

# Shift-based Anonymization

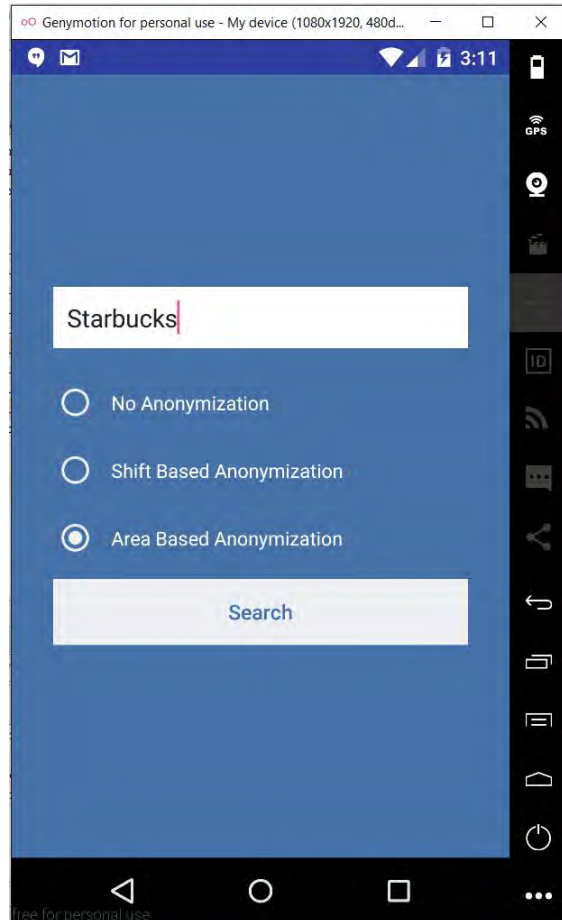

# Area-based Anonymization

# Privacy-aware LBS System

Three components: (i) Android Client, (ii) semi-honest LBS Server, (iii) trustable Analytic Server

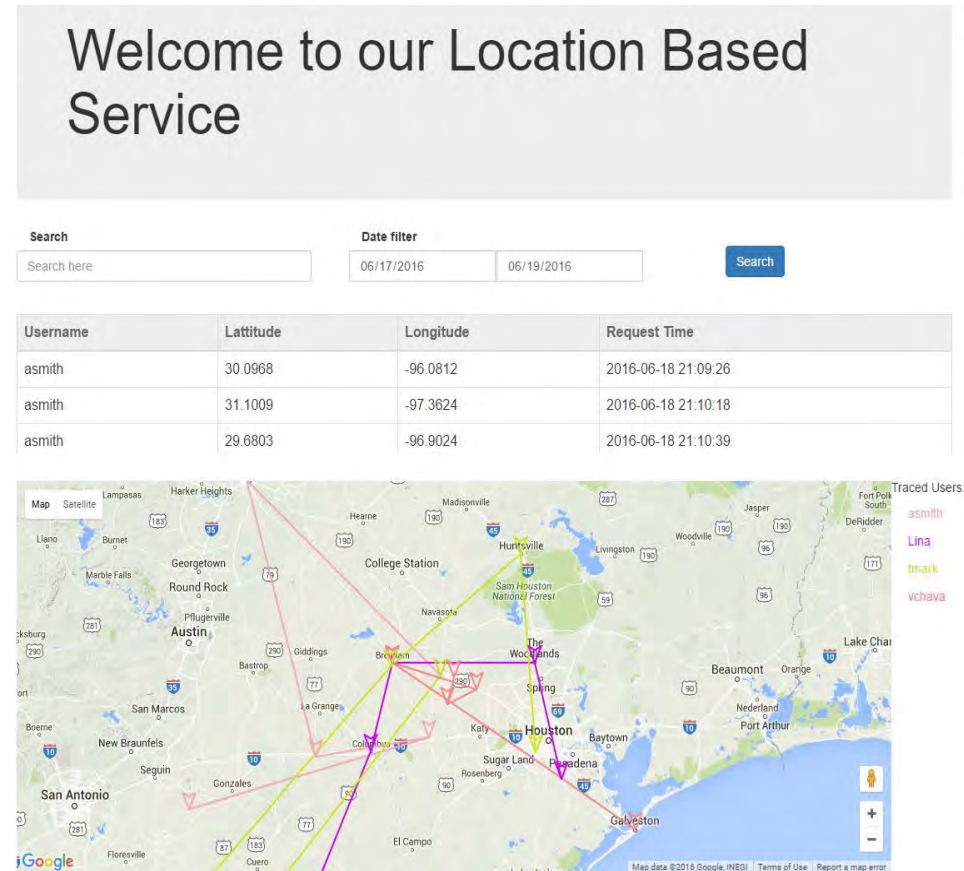

I. Android Client

Requests with user location info

Responses with retrieved landmark location info

II. LBS Server

# Tradeoff - Privacy Protection and Utility Cost

- Extreme case: disable location tracking on the phone, but no LBS!
- Utility definitions
  - different in different contexts
  - e.g., money or accuracy of inquired information

# The Analytic Server

## The distribution of user preferences on anonymization

Note: 0 refers to No anonymization, 1 refers to Shift based anonymization, 2 refers to Area Based anonymization

## User preference changes over time

Note: 0 refers to No anonymization, 1 refers to Shift based anonymization, 2 refers to Area Based anonymization

# Workshop

- Faculty virtual workshop in summer 2022
- 29 faculty from twenty institutions nationwide
- 10 Full Professors (34%), 8 Assistant Professors (28%), 6 Associate Professors (21%), 4 lecturers (14%), and 1 part-time instructor (3%)
- Customized Ubuntu VirtualBox images for the labs
- 25 participants completed both the pre and post workshop surveys
- A survey after each lab session

# Awareness of the Topics

Survey responses to a 5-point scale

|     | Never heard anything about the term | Only heard the term | Know only a few things about the term | Know some basic concepts of the term | Know the term's concepts and applications |
|-----|-------------------------------------|---------------------|---------------------------------------|--------------------------------------|---|

TABLE II  
CHANGES IN PARTICIPANTS' INTEREST IN TEACHING THE TOPICS

# Responses to 7 Statements

- (1) This lab increased my knowledge and skills in [session topic].
- (2) I learned how to teach [session topic] more effectively.
- (3) The session was well organized.
- (4) The session objectives were stated clearly and met.
- (5) The information provided and/or skills presented were relevant and useful.
- (6) The presenter(s) provided adequate time for Q&A.
- (7) The session materials provided were useful.

**TABLE III**  
**PARTICIPANTS' RESPONSES TO THE SEVEN STATEMENTS. THE # WITHIN THE PARENTHESIS REPRESENTS THE SURVEYS RETURNED**

| # | <b>DP</b><br>(22) | <b>RP</b><br>(22) | <b>IP</b><br>(19) | <b>DP</b><br>(20) | <b>IoT</b><br>(18) | <b>LP</b><br>(18) | <b>WT</b><br>(21) |
|---|-------------------|-------------------|-------------------|-------------------|--------------------|-------------------|-------------------|
| 1 | 5.27              | 5.61              | 5.42              | 5.35              | 5.67               | 5.33              | 5.43              |

| 3 | 5.41              | 5.70              | 5.58              | 5.40              | 5.72               | 5.50              | 5.29              |
| 4 | 5.45              | 5.57              | 5.63              | 5.35              | 5.72               | 5.72              | 5.19              |
| 5 | 5.55              | 5.65              | 5.58              | 5.30              | 5.67               | 5.61              | 5.38              |
| 6 | 4.95              | 5.70              | 5.74              | 5.60              | 5.50               | 5.67              | 5.48              |
| 7 | 5.36              | 5.65              | 5.53              | 5.40              | 5.67               | 5.44              | 5.43              |

on a 6-point Likert-Scale (1 = Strongly disagree, 2 = Disagree, 3 = Slightly disagree, 4 = Slightly Agree, 5 = Agree, 6 = Strongly Agree).

- Results show that almost all participants **agreed** that the sessions **increased their knowledge and skills** in the privacy technologies. They **learned how to teach** the topics effectively.
- Participants reported that the sessions were **well organized**, objectives were stated **clearly and met**, the information provided and/or skills presented were **relevant and useful**, presenter(s) provided **adequate time** for questions and answers, and the session materials were **useful**.

# Conclusions

- Introduced the project (NSF IUSE **1712496**)
- One example of the lab – location privacy in LBSs
- Faculty workshop feedback
