

# AN ANALYSIS OF PREREQUISITES FOR ARTIFICIAL INTELLIGENCE / MACHINE LEARNING-ASSISTED MALWARE ANALYSIS LEARNING MODULES

NOVEMBER 2, 2023

Mahmoud Abdelsalam

Maanak Gupta

Sudip Mittal

Portia Pusey

# SIX MODULES, LECTURE, BACKGROUND/TECHNICAL READINGS/VIDEOS, LABS WITH APPROPRIATE DATA SETS

- Cyber Threat Intelligence (CTI) and malware attack stages,
- Malware knowledge representation and CTI sharing
- Malware data collection and feature identification,
- AI assisted malware detection
- Malware classification and attribution
- Advanced malware research topics and case studies

# CONTEXT

3 Workshops at conferences

Coursework in three institutions

Practicing Professionals

Educators

Undergraduate and Graduate Students

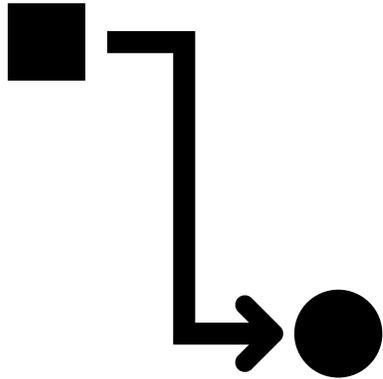

# LEARNING SCIENCE

New  
Modules

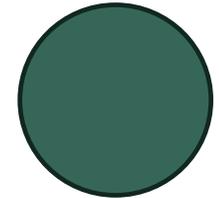

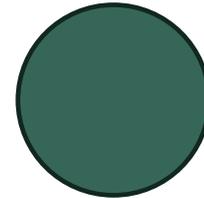

Relatively  
New Field

# PREREQUISITES IN WELL-DEFINED DOMAINS

Sequential

Nonsequential

# CONFERENCE WORKSHOPS

- “The major factor that hindered my understanding is my lack of knowledge about machine learning.”
- “I'm a complete newcomer to A.I. and Malware Analysis. I also doubt my ability to work with scripts.”

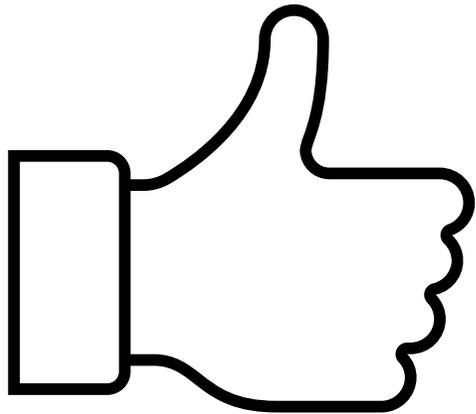

## LEARNER CONFIDENCE METHODOLOGY

Asked learners what they already know about a topic before teaching. This enables instructors to address competency gaps while they are teaching the modules.

Conducted checks for understanding and recorded learner responses. We used this information to refine the resource document provided to learners.

# TRENDS

- Less experience learners used extra resources.
- More students who took Introduction to Machine Learning needed resources than students who took Introduction to Cybersecurity courses.
- But when looking at both ML and Cyber intro classes, there were 9 students who took both intro courses and did not use resources. There were 6 ML intro course takers who used resources. Three of those had also taken intro to cyber courses.
- The five of the six students who used extra resources, had perfect scores on modules. One of the students who used extra resources earned 50%

SELF EFFICACY = CONFIDENCE

## GOOD INSTRUCTIONAL PRACTICE

- 1. Assess prerequisite knowledge
- 2. Have students work in teams
- 3. Provide supplementary resources
- 4. Use Classroom Assessment Techniques
